

Webinar:

Få værktøjer til at arbejde med CØ I byggeriet

8. marts 2024

Starter kl. 10:00

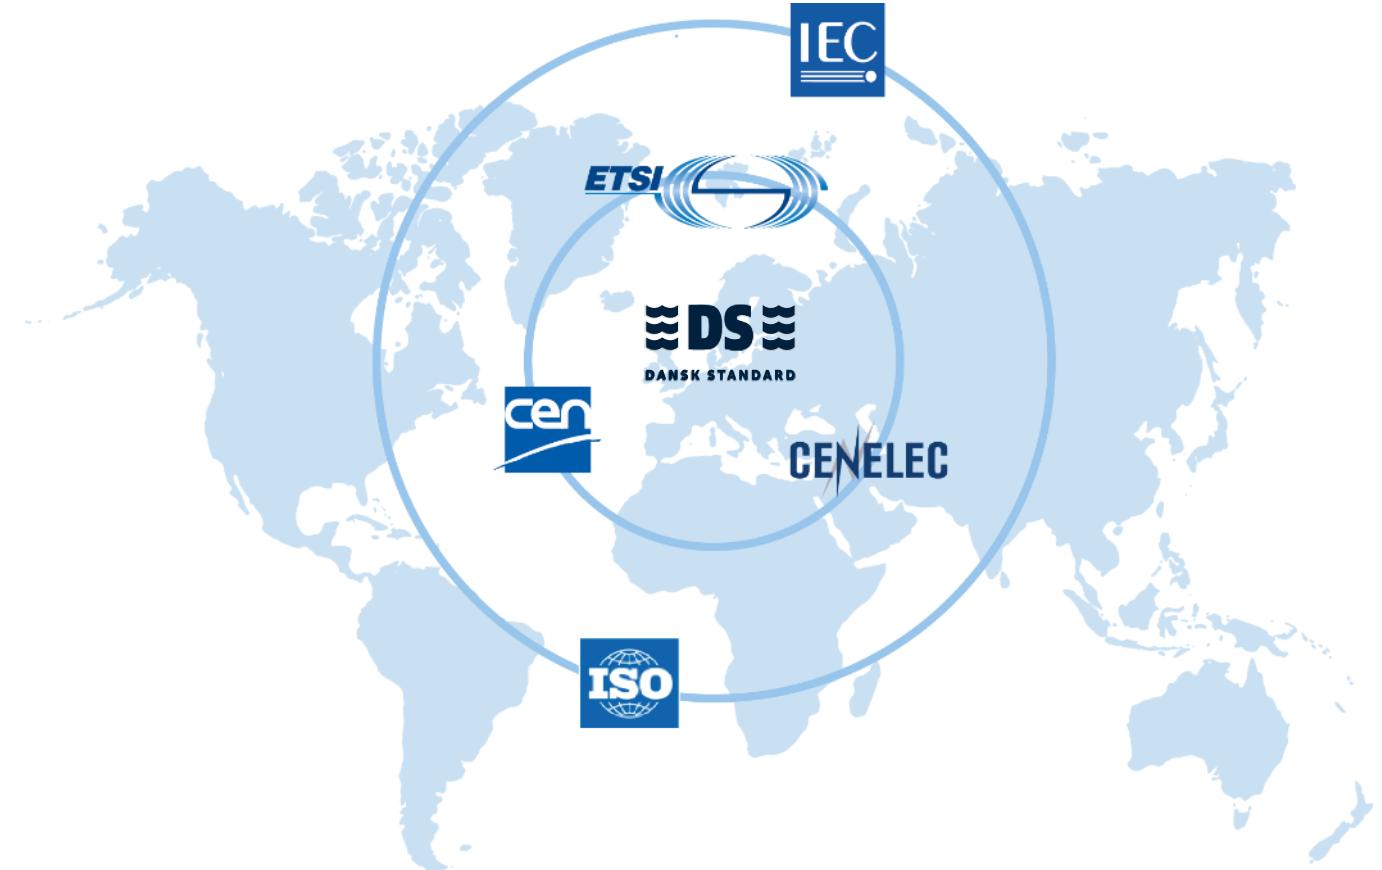

- et samarbejde mellem VCØB og DS

Dagsorden

- 1. Velkommen og præsentation af dagsorden for webinar**
- 2. Standardisering inden for CØ i Byggeriet v/ Charlotte Forsingdal, seniorkonsulent, Dansk Standard**
- 3. Status samt proces for udvikling af standarden, "Framework, principles, and definitions" v/Lisbeth Ottosen, professor, head of section for Materials and Durability, DTU SUSTAIN**
- 4. Task Group-forberedelse af forslag til ny/nye standarder v/Martha Lewis, Head of Materials, Henning Larsen Architects**
- 5. Om at deltage i en arbejdsgruppe, og hvordan StructuralReuse spiller ind i standardiseringsarbejdet v/ Karoline Fogh Gustafsson, Teamlead & Konsulent hos Lendager**
- 6. Hvordan kan du bruge VCØB som værktøj i omstilling til cirkularitet? v/Lise Lyngfelt Molander, forretningschef for bæredygtighed, Teknologisk Institut**
- 7. Spørgsmål fra Chat**

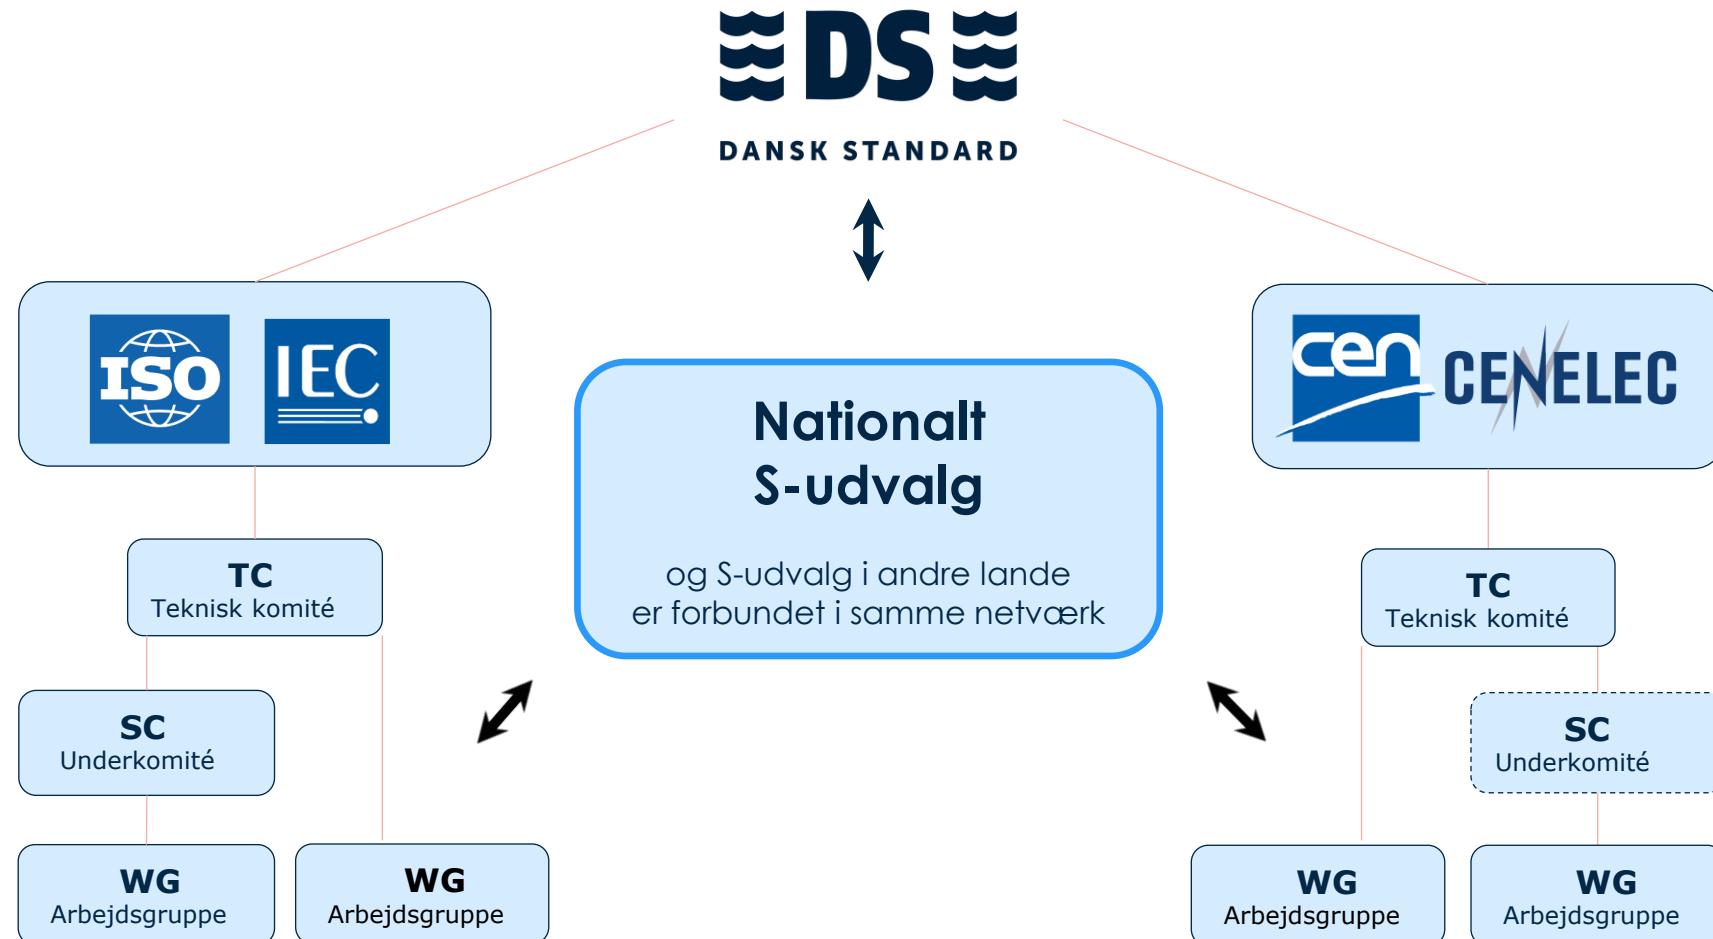

Dansk Standard – en erhvervsdrivende fond – udviklingen går mod flere fælles europæiske og internationale standarder

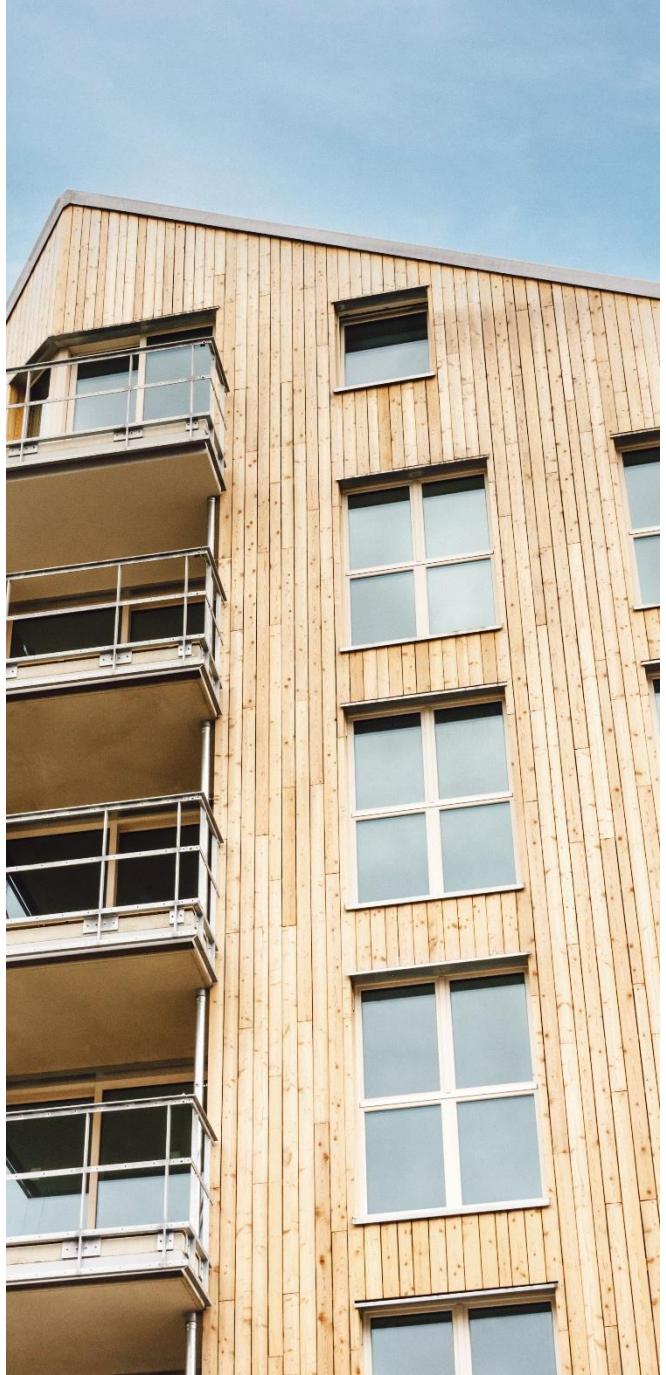

Danske standarder specielt indenfor byggeriet – henvisninger fra Bygningsreglementet

Hvordan hænger nationale udvalg sammen med omverdenen?

Organisering – standardisering - CØ byggeri

Flera S-878 medlemmer deltar aktivt i de europæiske arbejdsgrupper og task Groups

Hvad er opgaven for Task Groups?

Overveje og komme med anbefalinger til om der skal:

- nedsættes en WG (forslag til titel, scope, convenor)
- opstartes et eller flere PWI'er (forslag til projekt leder/ledere)

Anbefalingerne skal være aligned med:

- De øvrige SC1 TG's
- Øvrigt pågående arbejde i CEN/TC 350 og CEN/TC 350/SC1
- Relevant EU lovgivning og andre EU aktiviteter
- Resultatet og indhold i Gap analysen
- Diskussionsoplægget til plenarmødet
- Drøftelserne på plenarmødet

TASK GROUPS

1. Circularity related parts to a product, material and building passports/log-books (Denmark)
Martha Lewis (Task Group Leader); Support: Charlotte Forsingdal (DS)
2. Circularity assessment (The Netherlands)
Flora Anvarifar (Task Group Leader); Support: Merel Wagner (NEN)
3. Pre-demolition and pre-redevelopment audits and evaluation (UK)
Gillian Hobbs (Task Group Leader); Support: Colin McKerracher (BSI)
4. Horizontal standard/Technical Report for re-use of construction, products, and materials (Sweden)
Markus Beckman (Task Group Leader); Support: Annika Almqvist and Laura Linnala (SIS)
5. Horizontal deliverables for design for circularity at all levels for construction (The Netherlands)
Evert Schut (Task Group Leader); Support: Merel Wagner (NEN)

Proceslinje for Task Groups

Lisbeth M. Ottosen, DTU Sustain, Convenor CEN/TC 350/SC 1/WG1

Review

Circular economy in the built environment: A systematic literature review and definition of the circular construction concept

Felipe Ossio ^{*}, Carlos Salinas, Héctor Hernández

“The construction industry is still in the early stages of adopting this concept, and a clear and unified definition is needed for Circular Construction (CC) in the built environment”

Standardization – Circular economy in the Construction sector

- CEN/TC 350/SC 1 - Circular Economy in the Construction Sector
- WG1: Horizontal framework standard: Circular Economy – Terminology, Principles and Framework for Implementation (out in 2024)

Contents (1)

1	Introduction	3
2	Scope	3
3	Normative references	4
4	Terms and definitions	4
4.1	Terms related to circularity and the circular economy	4
4.2	General terms	5
4.3	Terms related to measurement and assessment	7
4.4	Terms related to construction	9
4.5	Terms related to circular actions	10
5	Levels of action	12
5.1	General	12
5.2	Materials/raw materials	13
5.3	Construction products	13
5.4	Construction works	14

Content (2)

6 Principles, objectives and actions of circular construction	15
6.1 The principles and objectives of circular construction	16
6.2 The loop methodology for classifying circular actions	17
7 Implementation of principles, objectives and actions	18
7.1 The relationship between this horizontal standard and technical standards	19
7.2 Specific guidance for organizations on how to implement circular strategies and actions	19
7.2.1 Assess the current situation	20
7.2.2 Identify changes possible and assess their impact	20
7.2.3 Developing a strategy and plan for a circular transition	20
7.3 Implementation at the levels of materials, product and construction works	21
7.3.1 Materials/raw materials	21
7.3.2 Construction products	21
7.2.4 Level of construction works	22
7.4 Time-related implementation issues	23

Content (3)

8 Guidance for the assessment of circularity in the construction sector 23

8.1	Introduction	23
8.2	Where circularity assessment should be applied in the construction industry	24
8.3	The system in focus and the system boundaries	24
8.4	Stakeholders within an assessment	25
8.5	Principal elements of a circularity measurement	26
8.6	Components of a circularity assessment	26
	8.6.1 Measurement, 8.6.2 Evaluation, 8.6.3 Assessment	
8.7	Measurement types for circular construction, and possible tools and indicators	27
	8.7.1 Material level. Resource Flow Analysis (RFA)/material flow analysis (MFA)	28
	8.7.2 Measurement of the principles and objectives of a circular construction	28
	8.7.3 Measurement of actions (measures) to reach the objectives	
	8.7.4 Measurement of impacts of circular construction in relation to SDG's	29
8.8	Indicators related to the level of action and stakeholders	29
	8.8.1 Material level, 8.8.2 Related to building elements and products, 8.8.3 At the level of construction works	

Why the three different levels?

- Levels:
 - Material
 - Product
 - Construction work

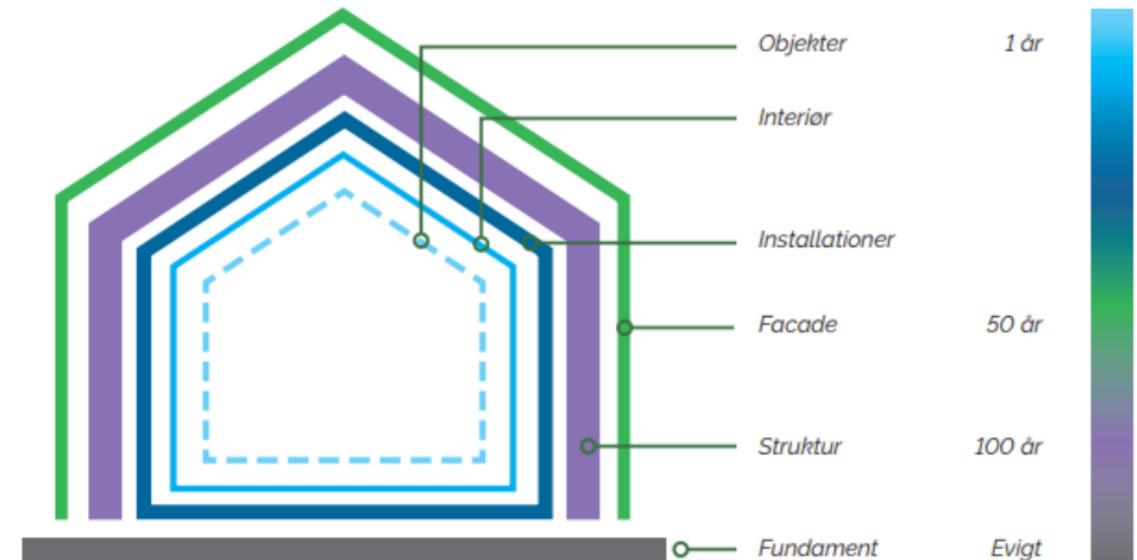

Illustration 3: Regeringens Klimapartnerskaber, Bygge og Anlægssektoren, side 18, Steward Brands lagmodel

Den tredje illustration er Stewart Brands klassiske lagmodel. Den model kan man bruge til at se på, hvilke bygningsdele man vil prioritere. *Fra Håndbog i cirkulær økonomi, Byggeri København 2021*

Materials du not have a lifetime

Principle	Objectives
1 Prevent the depletion of primary raw materials by construction products and their use in construction by design	Limit the depletion of stocks of primary raw materials as part of natural resources, enabling the availability of resources for future generations by increasing the use of renewable and recycled materials and re-used construction products decreasing the use of primary resources
2 Eliminate waste and emissions caused by construction products and their use in construction through design for circularity	Limit the environmental impacts resulting from the primary raw materials throughout subsequent material cycles. Eliminate emissions to air, soil and water
3 Protect and regenerate natural systems.	Limit land use for primary raw materials extraction (both non-renewable and renewable) and for landfill Prevent degradation of ecosystems as a result of resource extraction Regenerate ecosystems that have been degraded as a result of resource extraction
4 Extend service life of construction works, construction products and parts to allow multiple use cycles for as long as functional requirements are fulfilled	Reduce depletion of primary stocks Retain functional, technical and economic value
5 Retain value Decouple economic activity from the consumption of finite resources by retaining functional, material and economic value from previous cycles	Retain functional, technical, environmental and economic value over multiple use cycles Eliminate the use of persistent, toxic and bio accumulative hindering recycling options

Table 9: Actions for implementation of circular economy principles for construction products (not prioritized) SKITSE

Circular action by design	Refuse	Critical mindset. Does the product fulfill a real need and is there a need for the function?
	Prioritize	<p>Prioritize products</p> <ul style="list-style-type: none"> • made from raw materials with lowest environmental impact (e.g. made from recycled materials, least toxic compounds) • designed with reduced material use (through e.g. typology optimization) • That comes with a circular strategy (designed for long lifetime, <u>multiple lifetimes</u> and reuse through design for disassembly)
Circular action by life cycle management	Extend each lifecycle	<ul style="list-style-type: none"> • Maintenance and repair to keep original function • Refurbish to bring up-to-date
	Multible lifecycles (use cycles)	<ul style="list-style-type: none"> • Reuse of products in the same function through multiple lifecycles (same owner through e.g. leasing systems or multiple owners through sale from material platforms)
Reuse of parts and recycling of materials	Remanufacture and repurpose	<ul style="list-style-type: none"> • <u>Enhance the quality, performance, and lifespan of the product.</u> • Reuse parts of discarded construction products in new products with the same or a different purpose
	Recycle materials	<ul style="list-style-type: none"> • Process the products into high grade raw materials which can be used in new construction products. • Remove hazardous compounds from polluted components to fulfill todays requirements before recycling.

Gap analysis

Circular data, data storage and maintenance and product / building passports

CEN/TC 350/SC 1/WG 2 - Consultation report and findings V2 12/05/23

6. Circular data, data storage and maintenance and product/building passports

6.1 Overview

In the construction sector, circular data documentation is considered to be an important means to achieving a more circular construction sector, to promote reuse at the material, product, element and project (a building or infrastructure) levels. Establishing an effective circular construction sector is a key to reducing waste, reducing the consumption of raw materials and reducing the negative environmental impact (carbon emissions and pollution). Promoting transparency in the form of digitalized product and built environment documentation, passports support more informed product selection in the planning stages as well as encourage reuse and potentially increase value at end of life in order to effectively close the loop. The objective for additional documentation on a product and on a project is to “support sustainable production, to enable the transition to a circular economy, to provide new business opportunities to economic actors, to support consumers in making sustainable choices and to allow authorities to verify compliance with legal obligations.” (The Circular Economy Action Plan’s Sustainable Product Initiative)

Development of a standardized product passport would ensure that knowledge of the content can be maintained and tracked, to facilitate maintenance, repair and renovation, as well as increasing the value of materials and products related to reuse and recycling. Establishing standards for product and building/infrastructure passports would support the goals of the Green Deal and in particular Circular Economy Action Plan’s Sustainable Product Initiative, the EU’s Digital Europe Programme and the EU Data strategy by improving product sustainability and digitalization, boosting material and energy efficiency, enabling new business models and circular value extraction based on data sharing. Several member states have integrated calls for circularity documentation in their national sustainability building strategies. Built environment data is border-less, therefore EU standards on data and data sharing are unavoidable.

As the ability to compare and exchange digital representations of objects in construction is essential for a circular construction world, product level passports should be comparable and interchangeable. If developers of passports do not make any agreements in this respect, there is a risk that this desired situation will not actually come about. (CB'23 Guide vers. 2, p.6)

Recording data in a structured and harmonized way enables the value and application possibilities of passports to be increased: standardization of data collection + standardization of 3rd party verification.

European standards are necessary for digitalized passports and would support the Construction Product Regulation’s commitment to the single market for construction products. To ensure a harmonized development of digital passports in the EU, it is essential to develop a standard defining format, scope, digitalization and data generation and access for digitalized product passports.

WG2 Gap analysis

Circular data, data storage and maintenance and product / building passports

Gap No.	Preliminary GAP identified	Strongly agree	Agree	Neither agree or disagree	Disagree	Strongly disagree	Don't know	Strongly agree + agree score	Net Score
3.1	Gap in EU Taxonomy: concept requirements exist / standards missing	2.45	5.6	1.1	2		0.85	8.05	6.05
3.2	In relation to EPD and to national and international EPD databases	2.7	4.45	0.8	1.25		2.8	7.15	5.9
3.3	Gap in standards for: a) Product level data – material passports, product data sheets, Construction product regulation revision/ declaration of performance, EPDs b) Building level data - Building passport, Digital Building Logbook	4.65	4.15	1.65	0.35		1.2	8.8	8.45
3.4	Standards linked to 1) Data quality, long-term reliability, comprehensiveness and exchange formats 2) the common standards, including semantic standards, data template standards and interoperability protocols 3) the data governance models, business models and strategies for running data spaces	2.55	5.15	0.95	2.7		0.65	7.7	5
3.5	Data ownership and sharing; data security and transparency	3	6.05	0.45	2.2		0.3	9.05	6.85

WG2 Gap analysis

The background image shows a modern office environment. It features a large glass partition wall that looks out onto a city street with other buildings. Inside the office, there are several potted plants of various types and sizes. In the foreground, a whiteboard is propped up against a railing, with some handwritten text and diagrams visible. The overall atmosphere is professional and contemporary.

Om deltagelse i CEN/TC 135/WG2 x Structural Reuse

Karoline Fogh Gustafsson

Konsulent & Teamlead, Lendager Advising

Introduktion til oplægsholder

- Karoline Fogh Gustafsson
 - Uddannelse: Designingeniør – Danmarks Tekniske Universitet, 2021
 - Lendager siden 2019
 - Teamlead & konsulent i Lendager Rådgivning
 - Strategi, rådgivning, udviklingsprojekter og undervisning
 - Structural Reuse siden 2021

Karoline Fogh Gustafsson
*Teamlead & Konsulent
Lendager Rådgivning*

Structural Reuse

- Muliggøre genbrug af bærende elementer i beton, stål og træ
- Dokumentation af elementers kvalitet og egenskaber gennem ikke destruktive test, indenfor en acceptable risiko
- Projektresultat skal samles i teknisk fælleseje: Tekniske specifikationer i form af DS/INF
- Opdagelsen af work item *Reuse of structural steel* i CEN/TC 135/WG2
 - Structural Reuse deltager i arbejdet for Europæisk indflydelse og trække på flere erfaringer

Deltagelse i CEN/TC 135/WG2 “Technical requirements for the execution of steel structures”

- Formål:
 - Teknisk specifikation *Reuse of structural steel*
 - Primært baseret på projekterfaringer
 - Proces for test af strukturelt stål mhp. genbrug
- En anden ekspertise end dyb tekniske viden indenfor strukturelt stål
 - Et procesorienteret perspektiv
 - Fokus på bæredygtighed

Deltagelse i CEN/TC 135/WG2

- 3-4 årlige møder i arbejdsgruppen
- Projektleder der er ansvarlig for forfatningen af udkast til specifikationen
- Mødes online til gennemgang af udkast, kommentarer og diskussioner
- Lavere krav til en tekniske specifikation end en alm. standard
 - Skal ikke godkendes i andre komiteer og udvalg
 - Orientering og høring
 - Forventet snarlig udgivelse

Indblik i den tekniske specifikation – Reuse of structural steel

- Processen
 - Vurdering af genbrugelighed:
 - Dataindsamling
 - Tilstandsvurdering
 - Kvalitetsvurdering
 - Geometri
 - Testprotokol (A, B, C eller D)

Indblik i den tekniske specifikation – Reuse of structural steel

- Forskellig testprotokoller baseret på:
 - Viden om hvor stålet kommer fra
 - Er stålet produceret før eller efter 1970
 - Haves original dokumentation
- Testprotokollen foreskriver hvor mange destruktive prøver der skal tages

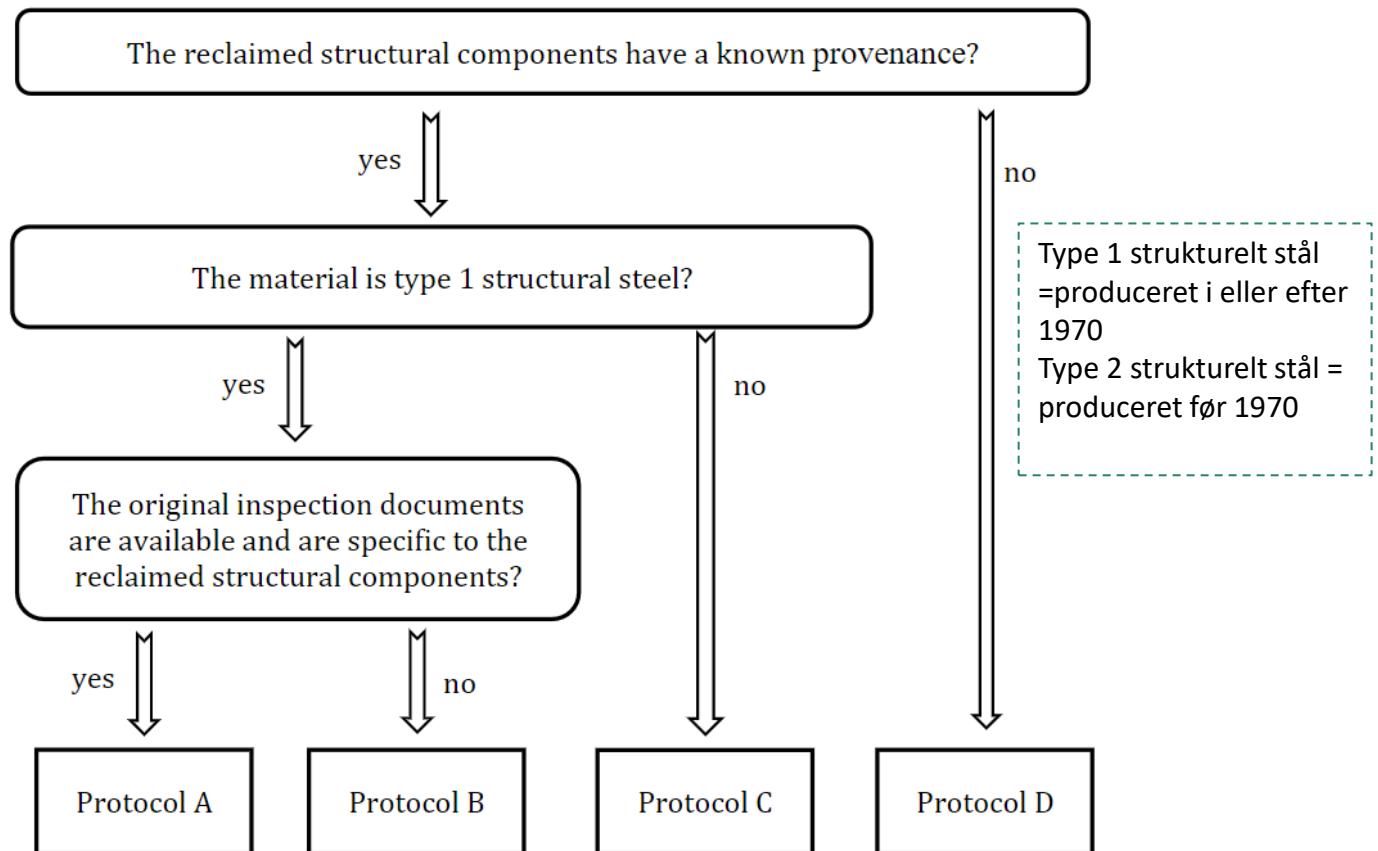

Figure 1 — Flowchart for the choice of testing protocol

Anvendelse i Structural Reuse

- Format til udarbejdning af DS/INF for beton og træ
- Projektet ønsker at oversætte den tekniske specifikation for genbrug af bærende stål til dansk
- Testprotokollen skal afprøves på fuldskalatest i Structural Reuse

Tak!

VCØB

Videncenter for Cirkulær Økonomi i Byggeriet

Få værktøjer til at arbejde med med CØ i byggeriet

Hvordan kan du bruge VCØB som værktøj i omstillingen til cirkularitet?

Lise Lyngfelt Molander Forretningschef for Bæredygtighed

Status og vejen frem for VCØB og VCØB community

Fra VHGB til VCØB

Videncenter for Cirkulær Økonomi i Byggeriet – VCØB (tidligere VHGB) – blev etableret i 2016 med en bevilling fra Grundejernes Investeringsfond, Realdania og Miljø- og Fødevareministeriet som en reaktion på et ønske i branchen om at styrke indsatsen for at formidle lovgivning på området til praksis.

Pr. 1. januar 2019 skiftede VHGB navn til VCØB som resultat af Regeringens Strategi for Cirkulær Økonomi, hvor der blev afsat 0,5 mio. kroner til drift af Videncenter for Cirkulær Økonomi i Byggeriet i både 2020 og 2021.

Derudover har VCØB opnået finansiering fra fondsmidler for perioden 1. januar 2020 til og med 31. december 2022

2023 har været fondet af RD og GI, men formål for at lande VCØB med brugerbetaling som indtægtskilde. Finansieringen stoppede oktober 2023

Overgang til VCØB 2.0 – Hvad har branchen brug for?

Teknologi – herunder AI, sensorik, droner, machine learning

Adfærd – på byggepladsen, kulturen, systemet rundt om

Spild på byggepladsen

Skal vi bygge al ting 4 gange – bygger forkert, med forkerte materialer

Fugt og skimmel – ved forkert byggeproces, opbevaring, levering

Selektiv nedrivning

Bygningsreglementet

...

Ambitionen for det nye VCØB

Roadmap for Cirkulær Økonomi i Byggeriet skal konkretiseres og implementeres – en kombination af teknologi, regulering og adfærd

CØ gappet skal lukkes – vi skal reducere vores forbrug, så vi holder os indenfor de planetære grænser

Vi skal fortsætte med at opsamle og formidle viden om CØ

VCØB den kommende tid

Nyhedsbrev – d. 06/03

Halvdags workshop for Nordisk Ministerråd i projektet Nordisk Netværk for
Cirkulært Byggeri – d. 15/03

Webinar om cirkulære forretningsmodeller – d. 18/03

Region H CØ casesamling – vil blive løbende udbygget i år og igen i 2025/2026

VCØB som værktøjskasse

Vidensbank

Show cases af alle de gode initiativer i branchen

Roadmap for cirkulær økonomi i byggeriet

- Konkretiseres og implementeres
- 28 indsatser

Erfaringsudveksling på tværs af branchen

Belyse konkrete problematikker og barriere ved cirkulær omstilling
